

When its 2am and your
code still isnt working

Clean Code

CS2308

Gentry Atkinson

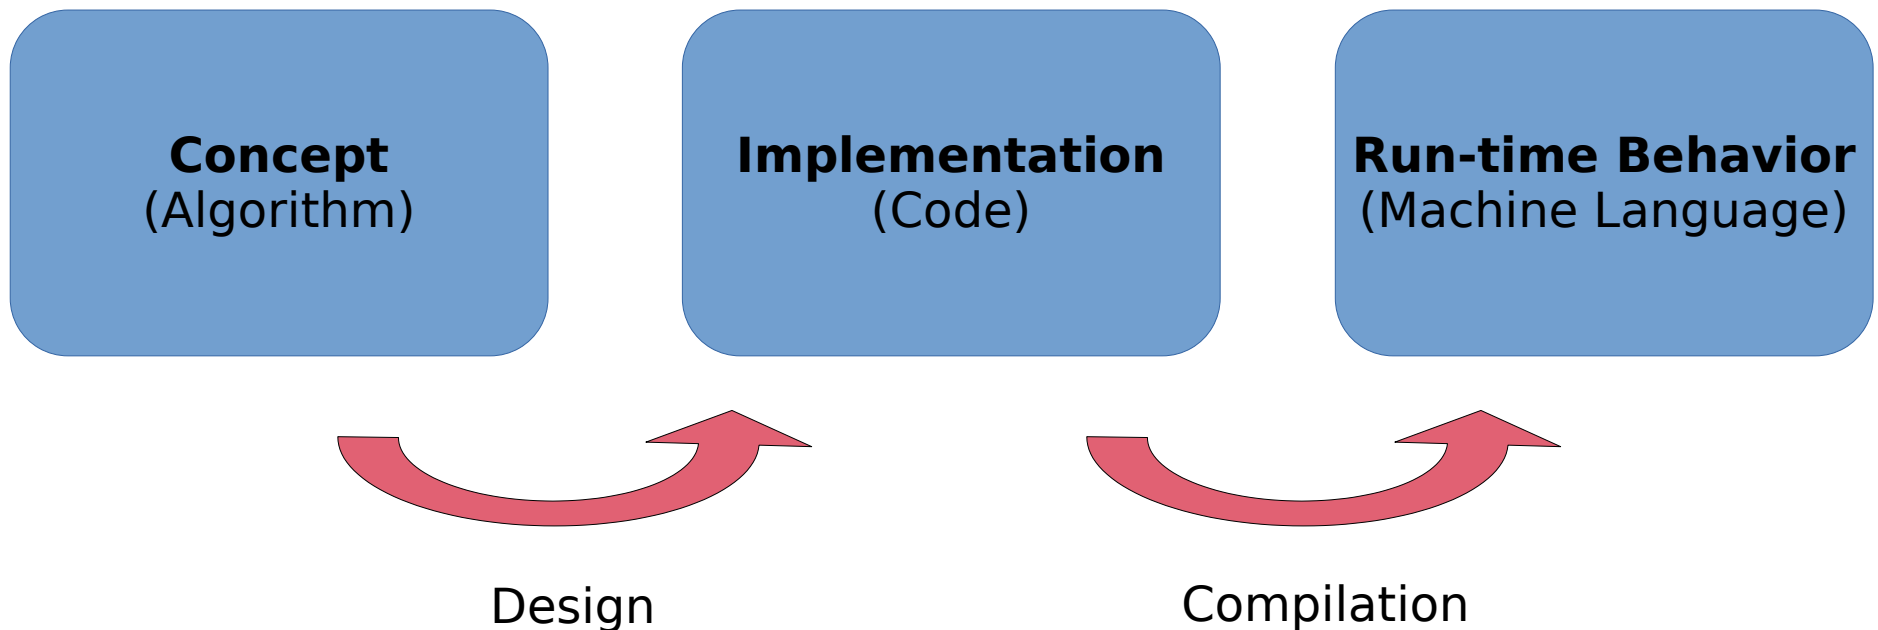

“Programmers create problems for themselves when they write code solely to satisfy a compiler or interpreter.”

-Robert C. Martin, Clean Code

Programs Exist in 3 Languages

Writing Clean Code

- Preserve and expose the relationship between the concept, the code, and the program.
- A reader should be able to look at 2 parts of your program and guess the 3rd.
- Comments connect the concept to the program.
- Good code style connects the program to the run-time behavior.
- Write comments first.
